

# PACKAGING EQUIPMENT

## Labeling and packaging equipment designed specifically for your plant.

At Associated Labels, we offer our technical expertise and consultation services to help you find ways to make your operations more efficient. Our Packaging Division experts will design packaging equipment to fit the unique needs of your plant.

Our experience with packaging equipment began in 1988 with the introduction of our pressure sensitive label applicators. With the rapid growth of our label manufacturing capabilities, we saw an expanding need for custom applying equipment to service the varied requirements of our customers.

We created our Packaging Equipment division to address this growing need and expanded beyond the simple provision of equipment for sale to include technical consultation and service. Our commitment has expanded into the design and manufacturing of custom fitted and integrated systems for our customers. Our staff includes Robotic and Automation specialists as well as Mechanical Engineers.

Let us create a custom packaging solution for your company.

Some products demand special treatment.

We've got you covered.
